

# Mini-Pleat Filter

## Product Specifications

### *Puracell VP and VPX Series*

The Puracell VP and VPX Mini-Pleat Filter Series utilize multiple mini-pleat packs which allow low resistance to air flow and long service life. The media shall be water resistant, inorganic, wet laid glass microfiber which does not support the growth of bacteria or mold. The Puracell VP and VPX media packs are constructed by pleating a continuous sheet of media. The pleats are separated by a uniform glue bead that produces low pressure drop while maximizing the filtration area. The media packs are completely sealed and bonded within the heavy-duty injection molded plastic frame. The filters shall be rated to withstand temperatures up to 180 degrees Fahrenheit.
